Instruction manual

1280i
Foreword

This instruction manual is intended to help the user to become familiar with the machine and take advantage of its application possibilities in accordance with the recommendations.

The instruction manual contains important information on how to operate the machine securely, properly and economically. Observation of the instructions eliminates danger, reduces costs for repair and down-times, and increases the reliability and life of the machine.

The instruction manual is intended to complement existing national accident prevention and environment protection regulations.

The instruction manual must always be available at the machine/sewing unit.

The instruction manual must be read and applied by any person that is authorized to work on the machine/sewing unit. This means:

- Operation, including equipping, troubleshooting during the work cycle, removing of fabric waste
- Service (maintenance, inspection, repair and/or)
- Transport.

The user also has to assure that only authorized personnel work on the machine.

The user is obliged to check the machine at least once per shift for apparent damages and to immediately report any changes (including the performance in service), which impair the safety.

The user company must ensure that the machine is only operated in perfect working order.

Never remove or disable any safety devices.

If safety devices need to be removed for equipping, repairing or maintaining, the safety devices must be remounted directly after completion of the maintenance and repair work.

Unauthorized modification of the machine rules out liability of the manufacturer for damage resulting from this.

Observe all safety and danger recommendations on the machine/unit! The yellow-and-black striped surfaces designate permanent danger areas, eg danger of squashing, cutting, shearing or collision.

Besides the recommendations in this instruction manual also observe the general safety and accident prevention regulations!
General safety instructions

The non-observance of the following safety instructions can cause bodily injuries or damages to the machine.

1. The machine must only be commissioned of the instruction book and operated by persons with appropriate training.
2. Before putting into service also read the safety rules and instructions of the motor supplier.
3. The machine must be used only for the purpose intended. Use of the machine without the safety devices is not permitted. Observe all the relevant safety regulations.
4. When gauge parts are exchanged (e.g. needle, top roller, needle plate, feed dog and bobbin) when tread-ing, when the workplace is left, and during service work, the machine must be disconnected from the mains by switching off the master switch or disconnecting the mains plug.
5. Daily servicing work must be carried out only by appropriately trained persons.
6. Repairs, conversion and special maintenance work must only be carried out by technicians or persons with appropriate training.
7. For service or repair work on pneumatic systems the machine must be disconnected from the compressed air supply system. Exceptions to this are only adjustments and functions checks made by appropriately trained technicians.
8. Work on the electrical equipment must be carried out only by electricians or appropriately trained persons.
9. Work on parts and systems under electric current is not permitted, except as specified in regulations DIN VDE 0105.
10. Conversion or changes to the machine must be authorized by us and made only in adherence to all safety regulations.
11. For repairs, only replacement parts approved by us must be used.
12. Commissioning of the sewing head is prohibited until such time as the entire sewing unit is found to comply with EC directives.

It is absolutely necessary to respect the safety instructions marked by these signs.

Danger of bodily injuries !
Please note also the general safety instructions.

IMPORTANT WARNING!

To the feeding network cord, it is necessary to connect the respective network plug which has been approved in the country of utilizing the machine. This operation should be performed by a worker acquainted with the electric safety rules being in force in the given country. The supplier is not responsible for any damages caused by defective plug or owing to incorrect assembly of the plug.

In spite of all safety measures made on the machines, inappropriate actions of the operator may lead to dangerous situations. In industrial sewing machines, attention should be paid to the following still remaining possible sources of injury:

1. Moving sewing needle
   - risk of injury when sewing with raised pressure foot or top roller, because the finger guard is then positioned too high.

2. Moving thread take-up lever
   - risk of injury when inadvertently or intentionally inserting the finger(s) between the thread take-up lever and its guard.

3. Moving pressure member
   - risk of injury when holding sewn work in immediate vicinity of the pressure member and beginning to insert under the pressure member a considerably thicker sewn work portion,
   - risk of injury when sinking the pressure member.

4. When switched off, the clutch motor slows down by inertia but would be reactivated by an accidental tread-ing down of the motor treadle. To avoid such risk, it is advised to hold the handwheel by hand and slightly to depress the motor treadle.
Part A - Instruction manual

1. Proper use of the machine

The machine can be used in the shoemaking industry for sewing of light medium and heavy shoe uppers. It is suitable for sewing natural and man made leathers, shoemaking textiles and even plastic parts of sports shoes.

The machine is also used in the fancy goods industry for sewing bags, handbags, rucksacks and cases from the usual fancy goods materials.

The machine sews with a double needle stitch. It is standardly equipped with needles of the 134 KKLR system which are suitable for sewing leather. When sewing textile materials it is necessary to install the needle of the 134 system. The machine enables the sewing of both technical and decorative seams which have almost the constant length of the stitch at a different sewing speed.

Only a dry material, which cannot be thicker than 6 mm when depressed by top roller, can be sewn by these machines, generally. The material cannot contain any hard subjects, to the contrary case it is possible to work only with applied eye-protective shield. Such a shield is not available at this time. Generally threads up to size 1000 dtex x 1 x 3 (Labelled number 10) have been used namely synthetic, cotton or core threads. Whoever should like to use other special threads, that one should consider the resulting risks and make appropriate safety measures.

The total thickness is determined by sewing with a thicker needle of very strong material. In cases like this it is also necessary substantially reduce the speed of sewing below the value shown in paragraph 5.

These special machines may be installed a operated only in dry and kept up expanses. We, as industrial sewing machines manufacturers, agree with the fact that our products are operated, at the least, so far learned operators who can carry out all usual operating functions and suppose their possible risks as perceptible.

Machine noisiness

Machine noisiness has been measured in accordance with the standards ISO 3746, ISO 11204 at maximum speed. Laeq = equivalent machine noise of the self-standing machine on the working place, converted to % machine employment (dB) - stated in the table

<table>

2. Description of the machine

It is double-needle machine. It sews with a double threaded lock-stitch. It has a lower circular feed, needle feed and a top roller which is driven. There are two possibilities for feeding. At the first step it feeds a lower circular feed, needle and top roller. Secondly it feeds only the circular feed and the top roller (the needle is above the throat plate). Feeding can be in both directions. The stitch length can be adjusted with an adjusting dial. The feeding mechanism can be adjusted to two systems after removing the rear cover:

1. Stitch length up to 4 mm at max. sewing speed up to 2500 rpm.
2. Stitch length up to 5 mm at max. sewing speed up to 1600 rpm.

Caution! Maximum allowed speed must not be exceeded for the given system of sewing. Otherwise it can cause damage to the feeding mechanism.

The machine is fitted with two large-size vertical hooks protected by a safety clutch.

The machine uses a wick lubrication system with central oil supply. The hooks are lubricated from an independent oil source. The simplest sub-class is standardly equipped with a knee operated lever. Specially for the Czech republic and if required with treadle. Reverse stitching is with a manually operated lever.

Higher sub-classes have always mechanical control like the simplest sub-class, and furthermore there is a possibility of levelling the needle, thread trimmer, electromagnetic top roller lift and electromagnetic reverse stitching (according to your order).

Each sub-class can be delivered in four sewing categories. Sewing category is determined by the number of the thread label and the corresponding number of the needle. Each sewing category is available with a range of needle distances. In the factory, the machine has been adjusted to the ordered needle distance and sewing category. Readjustments to another needle distance or sewing category should be carried out by an experienced mechanician. A stand is in the simplest sub-class equipped with a lever clutch motor and if required with a stop motor which enables the levelling of the needle.

In higher sub-classes, the stop motor is either situated on the machine table top or as a minimotor integrated on the machine head. The type of mechanical top roller lift depending on the stand has one or two treadles.
3. Machine sub-classes and sewing categories

3.1 Sub-class

3.2 Sewing categories

This code indication includes the equipment assembled on the machine head, both necessary equipment and optional equipment. The standard configuration of the equipment has been preset, according to the under mentioned table, in the factory which includes only necessary equipment. If the buyer demands a different configuration then the factory allocates a new code indication.

4. Survey of equipment

This survey does not include the equipment assembled on the stand.

4.1 Basic necessary equipment (at least one of each from the following group of equipment is assembled)

4.1.1 Needles

M 132 - needle 134 LR size 80 Schmetz
M 133 - needle 134 LR size 90 Schmetz
M 134 - needle 134 KKL size 130 Schmetz
M 135 - needle 134 KKL size 160 Schmetz

4.1.2 Wheel feeders

M 083 - wheel feeder with pitch of teeth 0.6 mm
M 082 - wheel feeder with pitch of teeth 1.2 mm

4.1.3 Top roller holders

M 156 - holder for the top roller ø 25 mm
M 157 - holder for the top roller ø 35 mm
M 295 - holder for the top roller ø 45 mm
4.1.4 Top rollers
M 172 - top roller ø 25 mm
M 173 - top roller ø 35 mm
M 174 - rubberized top roller ø 25 mm
M 175 - rubberized top roller ø 35 mm
M 310 - smooth top roller ø 25 mm
M 311 - smooth top roller ø 35 mm
M 296 - top roller ø 45 mm - width 3.8 mm
M 297 - top roller ø 45 mm - width 2.0 mm

4.1.5 Throat plates
M 024 - throat plate for needle distance of 1.2 mm
M 025 - throat plate for needle distance of 1.6 mm
M 026 - throat plate for needle distance of 2.0 mm
M 027 - throat plate for needle distance of 2.4 mm
M 028 - throat plate for needle distance of 3.2 mm

4.1.6 Throat plate inserts
M 111 - insert for throat plate for needle distance of 1.2 mm (for needle 60-80)
M 029 - insert for throat plate for needle distance of 1.6 mm (for needle 60-80)
M 030 - insert for throat plate for needle distance of 1.6 mm (for needle 80-110)
M 031 - insert for throat plate for needle distance of 1.6 mm (for needle 110-140)
M 114 - insert for throat plate for needle distance of 2.0 mm (for needle 80-110)
M 115 - insert for throat plate for needle distance of 2.0 mm (for needle 110-140)
M 032 - insert for throat plate for needle distance of 2.0 mm (for needle 140-160)
M 116 - insert for throat plate for needle distance of 2.4 mm (for needle 80-110)
M 117 - insert for throat plate for needle distance of 2.4 mm (for needle 110-140)
M 118 - insert for throat plate for needle distance of 2.4 mm (for needle 140-160)
M 119 - insert for throat plate for needle distance of 3.2 mm (for needle 140-160)

4.1.7 Connecting cables of the head to the drive
M 163 - connecting cable to the drive EFKA DC 1600/DA82GA; EFKA VD 552/6F82FA and EFKA VD 554/6F82FA
M 055 - connecting cable without any specified drive (with free cable end)
Note: For the machine provided with a minimotor, the cable is component part of the drive thereof.

4.2 Optional equipment
M 010 - built-in lighting (including transformer 230/12V)
M 018 - sewn work guide
M 149 - sewn work guide
M 198 - sewn work guide
M 194 - rear guide holder
M 242 - setting gauge
1280 611001V - high mortality spare parts kit in plastic box for sub-class without thread trimmer
1280 647001V - high mortality spare parts kit in plastic box for sub-class with thread trimmer
S794 222012 - halogen lighting (12 V, 20 W - contains transformer)
### 5. Technical data

| Table 3 |
|------------------|------------------|------------------|------------------|------------------|------------------|
| **Sewing category** | **Material sewn** | **Stitch length** | **Labelled number of polyester thread** | **Number of needle** | **Sewing speed** |

* The splice with the so-called spur is being mounted as a standard with the sewing categories 100 and 200 and is designed for sewing thin materials.

** For sewing thicker materials with a maximum stitch length it is possible to use a splice without spur (mounted as a standard with the sewing categories 300, 400).

---

**Stitch type**
- Double thread lock-stitch

**Top roller stroke**
- 5.5 ± 0.5 mm - via hand lever
- 12.5 mm via knee lever, treadle, electromagnet

**Hook**
- R 820 - vertical large
- System 134 KKLR
- System 134 KK

**Driving unit**
- Lever clutch 4 poles change motor min. 0.4 kW,
- lever clutch 2 poles change motor min. 0.4 kW
- Stopmotor min. 0.4 kW

**Weight of the head**
- max. 47 kg (53 kg head with minimotor)

**Weight of the stand**
- max. 61 kg (38 kg for head with minimotor)

**Opening space of machine head**
- 267 x 125 mm

**Dimension of bed plate**
- 178 x 518 mm

**Length of trimmed thread ends**
- 8...11 mm

**Input machine with clutch motor**
- max. 700 W

**Input machine with stop motor**
- max. 800 W (600 W with minimotor)

**Equivalent accoustic presser level of the sole machine at work place by 20% use of the machine during a shift under standard sewing conditions**
- 82 dB/A

**Layout dimensions of the machine (including the stand)**
- 1060 x 550 mm

**Height of the machine (including the stand and the thread stand)**
- 1680 mm
6. Operation of the machine

6.1 Threading a thread

Caution! Risk of injury!
Before threading a thread, turn the main switch off and wait until the machine stops!

Thread the threads as it is shown in picture.

Caution!
Not following the correct method of threading a thread may cause serious damage to the function of the machine.

6.2 Inserting the bobbin and threading the lower thread

Caution! Risk of injury!
Turn the main switch off and wait until the motor stops!

- Tilt the shutter (1) up.
- Insert the bobbin (2) with thread end (3) in the direction as shown in the picture.
- Thread the thread through the notch (4) and the space (5) and place under the spring (6).
- Cut off the thread end as shown.

www.promelelectroavtomat.ru
6.3 Regulating the thread tension

The thread tension must conform to the thickness of the sewn threads, thickness and hardness of sewn material (thin and soft material will fold with high tension) and the kind of seam. An ordinary fitting seam should be formed with stitches knitted in the middle of the sewn material.

A decorative seam is mostly used with rough threads (10, 20) on thin material and it has tied up threads on the reverse side of the material for achieving a decorative appearance. Thread tension adjustment is by standard sewing (table 3) conditions in accordance with table No. 4.

If achieving of a decorative seam with stitch knitting on the underside is wished, it is necessary to decrease the upper thread tension, it is carried out by turning of nuts (1), in the counter-clockwise sense.

<table>
<thead>
<tr>
<th>Sewing category</th>
<th>Kind of seam</th>
<th>Identified value upper thread tension</th>
<th>Maximum tension of lower thread</th>
</tr>
</thead>
<tbody>

</tr>
<tr>
<td></td>
<td>Decorative</td>
<td>10</td>
<td></td>
</tr>
</tbody>
</table>

If the maximum lower thread tension exceeds the values given in table No. 4, it may cause problems in the beginning of sewing after the previous thread trim.

Measurement of tension is done by dynamometer.

Warning:
The upper thread tensioner has been loosened automatically after every trimming and top roller lifting. In these cases the thread tension cannot be measured.

Regulating the thread tension

Caution! Risk of injury!
Before regulating the lower thread tension, turn the main switch off and wait until the motor stops.

The upper thread tension is adjusted with nuts (1). Its clockwise turning increases the tension.
The tension of the auxiliary tensioner (3) should be as low as possible but it should be on a level so that the upper thread would not pull out of the tensioner when the work is being removed.
The lower thread tension is adjusted with a screw (2). Its clockwise turning increases the tension.
Tension correlation rate defines the depth of the seam tied through. The result of raising the upper tension will be the decreasing depth of tie through. The opposite will apply with the lower thread.
6.4 Bobbin thread winding
- Insert the bobbin (1).
- Spool counter-clockwise manually onto the bobbin, minimum six threads of the lower thread (3).
- Insert the thread ends into the equipment (4) and cut off the ends.
- Press the lever (2) until it reaches its limit.
- Switch on the machine.
- The winder will automatically switch off after winding.
- Take off the hook bobbin and cut off the end in the equipment (4).
- The nut (5) is instrumental to thread tension control for winding. Turning clockwise sense the thread tension is increased and the single threads are more firmly fixed on the bobbin.
- The tension cannot be so extensive as far as slipping of the winder friction drive has occurred.

6.5 Needle replacement

Caution! Risk of injury!
Before remowing and inserting the needle turn the main switch off and wait until the motor stops!

- Turn with the hand wheel as far as the top needle (1) position has been reached.
- Loosen the screw (2), (3) and remove the required needle.
- When inserting a new needle, care is to be taken that groove (4) above the needle’s eye was in the same direction as the hook.
- Tighten the screw (2), (3).

The inserted needle must respond to the sewing category according to paragraph No. 5, table 3. Otherwise it will cause damage to sewing, or eventually the machine could be broken.

6.6 Regulation of pressing the top roller

The pressing of the top roller should be as low as possible but on a level so that the top roller would not fly over when needle comes off the material and that the feeding power got over the thread pull by stitch tightening.
By turning of the screw (1) clockwise pressing of the top roller has been increased, by counter-clockwise turning pressing of the top roller has been decreased.
6.7 Lifting the top roller up

Mechanical lifting of the top roller is enabled by means of the hand lever (1), which contemporarily, after it has been lifted in the arrow direction, is locking the top roller in its top position and turning (adjustment) of the machine is possible. The top roller can be lifted via knee lever or left treadle - depending on the machine sub-class. Automatical lifting by means of electromagnet is described in the paragraph No. 7.

![Warning](image)

When lifting top roller via knee lever or the treadle or electromagnet, the needle must be in the upper position and the machine has to come to a full stop.

6.8 Reverse stitching

The change of direction of sewn work can be mechanically controlled via a reverse stitching lever (1) by its depression in the arrow direction (down). The sub-class defines whether the machine has electromagnetic reverse stitching – see paragraph No. 7.

6.9 Stitch length adjustment

Stitch length adjustment is by dial (2) by its turning. Turning clockwise stitch length is decreased, turning counter-clockwise stitch is length increased.

6.10 Safety clutch

The machine is provided with a safety clutch which disengages the driving unit, when the hook is blocked. Reconnection must be done in the following way:

![Caution](image)

**Caution! Risk of injury!**

Before assembly turn the main switch off and wait until the motor stops!

- Turn the manually operated wheel as far as you can reach the suitable point for inserting a screwdriver into the space(1).
- Continue turning the manually operated wheel in direction of the arrow located on it, until you feel the drop in of the safety clutch.
7. Electronic control of the machine
(it is valid for sub-classes equipped with stop motor)

7.1 Control of sewing by means of control elements
7.1.1 Via treadle (treadle positions and function possibilities)

The position of the treadle is read by the reader, which can recognise 16 levels. Its meaning is shown on the table.

<table>
<thead>
<tr>
<th>Treadle position</th>
<th>Treadle</th>

</tr>
<tr>
<td>13</td>
<td>Fully forwards</td>
<td>Sewing at maximum speed (12. gear)</td>
</tr>
</tbody>
</table>

Note: It is possible to pre-adjust the needle position (up/down) and foot position (up/down) by stopping in seam (introducing the treadle in neutral position). Foot position (up/down) after seam finishing (pressing the treadle by foot fully backwards).

7.1.2 Via pushbutton panel

There are four built-in pushbuttons in the panel with fixed adjustable functions:
T1 - bar operation (by pressing this pushbutton during sewing the sewn work is feed back)
T2 - needle up/down (each press of the pushbutton changes the needle position)
T3 - temporary cancelling (recalling) bar (in case) the bar is pre programmed at the start and end of the seam, by pressing the pushbutton down will uniformly switch off; if it is not chosen it will switch on by pressing the pushbutton
T4 - revolutions limitation (valid for motor Efka DA82GA)
- reduction of pressure of the presser foot for Mini-stop EFKA DA320 (see The instructions for assembling with Mini-stop, par. 5.2.4)

7.1.3 Via control panel Efka V 810/V 820

These functions are standardly assigned to the pushbuttons A, B:
A - cancelling (recalling) the bar (the same function as T3 of the pushbutton panel)
B - needle up/down (the same function as T2 of the pushbutton panel)

Note: function of the A,B pushbuttons can be changed by different adjustment of parameters 293,294 (see the parameters list of driving unit Efka DA82GA).
7.2 Adjustment of automatic functions via control panel for stop motor

7.2.1 By using stop motor Efka with panel V 810

Functioning pushbuttons engagement:

- **Pushbutton P** Recalling and program mode termination
- **Pushbutton E** Confirmation of program mode changes
- **Pushbutton +** Increase of value displayed in program mode
- **Pushbutton -** Decreasing value displayed in program mode
- **Pushbutton 1** Start bar SINGLE/DUPLICATE/OFF
- **Pushbutton 2** End bar SINGLE/DUPLICATE/OFF
- **Pushbutton 3** Automatic top roller lifting after stopping at the seam ON/OFF
- **Pushbutton 4** Basic position of needle UP/DOWN

Symbols:
- **Symbol C** Connection of automatic revolutions
- **Symbol D** Connection of lighting barrier
- **Symbol E** The machine is running
- **Symbol F** The revolutions limitation switch on
- **Symbol G** Connection of lower thread controller, flashing light indicator symbol when the threads supply on the bobbin is running out

The arrows on the display indicate switching the functions which are displayed by symbols above the pushbuttons on.

7.2.1.1 Adjustment by means of buttons with fixed setting function

*Note:* It is important to finish the seam in order to reach effective button pressing (press the treadle fully backwards down).

**Setting start bar:**
Drive enables sewing start bar automatically. It is necessary to choose the type (single, double, off) and number of stitches which will be sewn forwards and backwards.

The arrow above its symbol shows the type of bar (chosen by gradually pressing pushbutton 1). It will be displayed following after pressing pushbutton 1.

**Arv (SAv) XXX** - number of stitches of start (fancy) bar forwards or

**Arr (SAr) XXX** - number of stitches of start (fancy) bar backwards for about 3 sec.

At this time you can change the number of stitches by gradually pressing the pushbutton + or -.

**Setting end bar:**
The same applies to the start bar (setting by the means of pushbutton 2).

**Erv (SEv) XXX** - end (fancy) bar number of stitches forwards

**Err (SEr) XXX** - end (fancy) bar number of stitches backwards
Note: The last section of end bar must have at least 3 stitches.
Foot position adjustment by stopping at the seam (by neutral position of treadle) and after finishing seam (by neutral position of treadle):
Setting is by means of pushbutton 3, arrow indication above the corresponding symbol.

Needle position adjustment by stopping at the seam:
Setting is by means of pushbutton 4.

7.2.1.2 Setting by means of parameters

Drive memory contains the parameters which enables sewing system tuning. These parameters have exact meaning and they are divided into 3 levels. Further parameters which are available only for operation will be quoted. Each parameter has its (sequence) number and value.

General procedure by changing parameters of operation level:
- switch the main switch on or finish the seam by pressing the treadle fully backwards down
- press pushbutton P on the panel V 810
- it will be displayed on the display F 000 (000 it is the number of parameter)
- by several times pressing + (or -) set the requested number of parameter
- push pushbutton E down and it will be shown the value of parameter on the display
- you can change the value by means of pushbutton + or –
- by pushing pushbutton E down you will change the sequence to the following number of parameter
- by pushing pushbutton P down you will leave the mode of changing parameters

Note: 1. For permanent memory storing of changed parameter, it is necessary to press treadle forwards down after changing of parameters.
2. Mode of changing parameters is possible only after finishing of the seam.

Number of stitches in bars:
Number of stitches is stored in parameter’s number.

<table>
<thead>
<tr>
<th>No. of parameter</th>

Sewing according to sewing program:
Drive with panel V810 automatically enables sewing of 1 seam with setting number of stitches. It is necessary to set in corresponding number of stitches, and initialisation of sewing program.

7.2.2 By using stopmotor Efka with panel V 820

Functioning pushbuttons engagement:

- **Pushbutton P**: Call and termination of programming mode
- **Pushbutton E**: Confirmation when changing programming mode
- **Pushbutton +**: Increasing the value displayed in programming mode
- **Pushbutton -**: Reducing the value displayed in programming mode
- **Pushbutton 1**: Start bar SINGLE/DROUBLE/OFF
- **Pushbutton 2**: Stitch counting FORWARD/BACK/OFF
- **Pushbutton 3**: Light barrier function LIGHT-DARK/DARK-LIGHT/OFF
- **Pushbutton 4**: End bar SINGLE/DROUBLE/OFF
- **Pushbutton 5**: Function TRIMMING/TRIMMING+EJECTOR/OFF
- **Pushbutton 6**: Automatic top roller lifting after having stopped inside the seam ON/OFF
- **Pushbutton 7**: Basic needle position UP/DOWN
- **Pushbutton 8**: Lower thread waste controlling ON/OFF
- **Pushbutton 9**: Operation pushbutton - programmable
- **Pushbutton 0**: Programming/processing of 40 possible sewing sections (seams)
- **Pushbutton A**: For cancelling or calling the bar
- **Pushbutton B**: For switching needle position UP/DOWN, resp. shifting pushbutton in the programming mode

- **Symbol C**: Designating symbol C for code number
- **Symbol D**: Designating symbol F for parameter number
- **Symbol E**: Programme number in TEACH IN mode
- **Symbol F**: Seam number in TEACH IN mode
- **Symbol G**: Run blocking ON
- **Symbol H**: Blocked insertion by pushbutton
- **Symbol I**: Fault reporting
- **Symbol J**: Insertion of stitch number in TEACH IN mode
- **Symbol K**: Connected lower thread controller, flashing symbol when running out thread reserve on bobbin
- **Symbol L**: Limitation of revolutions ON
- **Symbol M**: Right needle disconnected
- **Symbol N**: Evening stitches for light barrier in the TEACH IN mode
- **Symbol O**: Machine is running
Symbol P  Automatic revolutions ON
Symbol Q  Left needle disconnected

The arrows on the display indicate switching the functions which are displayed by symbols above the pushbuttons on.

7.2.2.1 Adjustment by means of buttons with fixed setting function

Note: It is important to finish the seam in order to reach effective button pressing (press the treadle fully backwards down).

Setting start bar:
Drive enables sewing start bar automatically. It is necessary to choose the type (single, double, off) and number of stitches which will be sewn forwards and backwards.
The arrow above its symbol shows the type of bar (chosen by gradually pressing pushbutton 1). It will be displayed following after pressing pushbutton 1.
Arv (SAv) XXX - number of stitches of start (fancy) bar forwards or
Arr (SAr) XXX - number of stitches of start (fancy) bar backwards for about 3 sec.
At this time you can change the number of stitches by gradually pressing the pushbutton + or -.

Setting end bar:
The same applies to the start bar (setting by the means of pushbutton 4).
Erv (SEv) XXX - end (fancy) bar number of stitches forwards
Err (SEr) XXX - end (fancy) bar number of stitches backwards
Note: The last section of end bar must have at least 3 stitches.

Foot position adjustment by stopping at the seam (by neutral position of treadle) and after finishing seam (by neutral position of treadle):
Setting is by means of pushbutton 6, arrow indication above the corresponding symbol.

Needle position adjustment by stopping at the seam:
Setting is by means of pushbutton 7.

Trimming switched ON/OFF:
To be set using pushbutton 5.

Sewing programme ON:
To be switched on using pushbutton 0.

Switching ON/OFF the function of the pushbutton F:
The pushbutton F on panel can have assigned one of the following functions: Sst - softstart
SrS - fancy bar
Frd - reverse angle after trimming

7.2.2.2 Setting by means of parameters

Drive memory contains the parameters which enables sewing system tuning. These parameters have exact meaning and they are divided into 3 levels. Further parameters which are available only for operation will be quoted. Each parameter has its (sequence) number and value.

General procedure by changing parameters of operation level:
- switch the main switch on or finish the seam by pressing the treadle fully backwards down
- press pushbutton P on the panel V 820
- on the display there is no data shown
- by depressing the pushbutton E several times, set the required parameter (without having displayed the parameter number)
- you can change the value using pushbuttons + or -
- by depressing the pushbutton E you will pass in the given sequence to the following parameter
- by depressing the pushbutton P down you will leave the mode of changing parameters
Note: 1. For permanent memory storing of changed parameter, it is necessary to press treadle forwards down after changing of parameters. 2. Mode of changing parameters is possible only after finishing of the seam.

Number of stitches in bars:
Number of stitches is stored in parameter's number.

<table>
<thead>
<tr>
<th>No. of parameter</th>
<th>Value range of parameter</th>
<th>Description of parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>000(080)</td>
<td>0-254</td>
<td>Number of stitches of start (fancy) bar forwards</td>
</tr>
<tr>
<td>001(081)</td>
<td>0-254</td>
<td>Number of stitches of start (fancy) bar backwards</td>
</tr>
<tr>
<td>002(082)</td>
<td>0-254</td>
<td>Number of stitches of end (fancy) bar backwards</td>
</tr>
<tr>
<td>003(083)</td>
<td>0-254</td>
<td>Number of stitches of end (fancy) bar forwards</td>
</tr>
</tbody>
</table>

The drive with the panel V 820 enables sewing automatically up to 40 seams distributed up into eight programmes with the given stitch numbers and sewing direction (forwards/rearwards). For more detailed information see the original driving instructions.

8. Maintenance

Caution! Risk of injury!
Maintenance work can only be carried out when the machine is off and the motor stops.

Maintenance work which must be carried out and the intervals between them and set out in the following table.

<table>
<thead>
<tr>
<th>Maintenance work</th>
<th>Interval</th>
</tr>
</thead>
<tbody>
<tr>
<td>Removing throat plate and its cleaning. Cleaning of circular feed dog, hooks and space around feeding wheel of material and thread residues. To clean it, use brush. It is prohibited to use compressed air for cleaning without protective guards preventing injury of persons with flying impurities. Hooks lubrication - (one drop of oil).</td>
<td>1 day</td>
</tr>
<tr>
<td>Checking the oil level in the hooks lubrication oil tank (2).</td>
<td>1 week</td>
</tr>
<tr>
<td>Checking the oil level in the oil tank (1) of the central distribution.</td>
<td>1 month</td>
</tr>
</tbody>
</table>

For the lubrication of this machine Esso SP-NK 10, DA 10 or an equivalent quality lubricating oil is recommended (viscosity at 40°C: 10 mm²/s; flash point: 150°C). The oil tank (1) of the central distribution and the tank (2) of the hooks lubrication are to be filled the holes (3) up to the mark max.
## Operating instructions for eventual trouble shooting

Meaning of abbreviations: NP - Instruction manual  
SK - Instructions for service  

Note: When the machine is driven by a stop motor, it is indispensable to check up, before starting its repair, the setting of its parameters according to NP, part B, par. 5.  

<table>
<thead>

<tr>
<td></td>
<td>3.3 Upper thread not squeezed, at the first needle piercing, between sewn material and rear edge of piercing hole.</td>
<td>Set needle feeding in such a way, so that, with the maximum stitch length, the needle almost touches the rear edge of throat plate insert accordin to SK, par. 3.2.5. Reduce height of wheel feeder according to SK, par. 3.6.3.2.1. Put nearer top roller to needle and shift it rearwards according to SK, par. 3.7.6.2.</td>
</tr>
</tbody>
</table>
4. Stitch skipping.

3.4 Upper thread incorrectly caught by movable trimming knife. Lumps of thread remaining in hook space.

Set correctly hook opening according to SK, par. 3.1.6 and adjust setting of trimming cam according to SK, par. 4.3.

3.5 Needle too thick with regard to thickness of thread and sewn material.

Use thinner needle.

4.1 Needle incorrectly inserted.

Insert needle according to NP, par. 6.5.

4.2 Too big distance between needle and hook point.

Set according to SK, par. 3.1.3 and 3.1.5.

4.3 Incorrectly set needle hook timing or needle height.

Set according to SK, par. 3.1.4 and 3.2.3.

4.4 Rear needle guide too high - sewn material lifts when moving the needle and the hook point does not catch the upper thread loop.

Set rear guide, so that it touches slightly the sewn material with the lowered top roller.

4.5 Excessively elastic material or excessively elastic thread.

Increase timing as needed and set the needle bar height according to SK, par. 3.2.3.

4.6 Damaged hook point.

Replace hook.

5. Incorrect stitch locking. Threads are locked on top side of sewn material.

5.1 Lower thread tension.

Set according to NP, par. 6.3.

5.2 Incorrect threading and tension setting of upper thread.

Thread according to NP, par. 6.1 set according to NP, par. 6.3.

6. Incorrect stitch locking. Threads are locked on bottom side of sewn material and increasing of tension is of upper thread no help.

6.1 Upper thread out of tensioning dishes.

Thread correctly according to NP par. 6.1.

6.2 Opening bobbin case lifter incorrectly set (it opens too little).

Set according to SK, par. 3.1.6.

6.3 Wheel feeder too low - difficult passage of thread between sewn material and throat plate.

Set wheel feeder height according to SK, par. 3.6.3.2.1.

6.4 Incorrect side setting of the needle bar holder or needle bed shifting - insufficient gap between needle and edge of piercing hole in the throat plate insert from the hook side.

Set according to SK par. 3.2.5. Correct setting of the distance between needle and hook according to SK par. 3.1.3.

6.5 Needle guide set too low - sewn material is pushed against throat plate and upper thread threading is difficult.

Set guide according to SK par. 3.4.3.

6.6 Upper thread insufficiently tensioned when passing through hook.

Shift thread limiter to the right according to SK, par. 3.5.5 or by more than the value quoted there.

7. Stitches insufficiently tightened and with irregular positioning. Thread unravelled.

7.1 Low tension of upper and lower threads.

Set tension according to NP, par. 6.3.

7.2 Upper thread insufficiently tensioned when passing through hook.

Shift thread limiter to the top according to SK, par. 3.5.5 or more than the value quoted there.

Supplement .................................................................................................................................................................................................................. 13
Part B - The instructions for assembling

1. Safety instructions

**Caution !**
Assembly of the machine must only be carried out by appropriately trained technician.
Any operations to be performed on the electric installation of the sewing machine are to be done only by a competent electrician.

2. The way of machine supply

The contents of supply will be determined in agreement between the supplier and buyer. There are following possibilities:

2.1 Complete head with accessories

In this case the supply contains:
- Complete head.
- Chosen spare parts in the bag under the presser element (see parts indicated * in catalogue of spare parts).
- Standard accessories (it contains tools-see module in catalogue of spare parts).
- Special accessories (it contains some components of a stand and upper belt cover-see module in catalogue of spare parts).

The supply like this is not complete. Buyer will provide missing components himself or he can put in an extra order to get them according to the following paragraphs.

2.2 Stand

Delivery contains components of a stand, however, without components of a stand included in special accessories supplied with machine head (see par.2.1) and without any electrical components. If it hasn't been agreed otherwise, the stand is supplied in separate pieces. If the assembled stand is asked, special accessories are used from head supply.

Stand (ordered number S100 010000) contains following items:

<table>
<thead>
<tr>
<th>Order number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>MG55 000501</td>
<td>Stand frame</td>
</tr>
<tr>
<td>MG53 002501</td>

</tr>
</tbody>
</table>

Equipment for foot lifting by treadle:

<table>
<thead>
<tr>
<th>Order number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>S522 000450</td>
<td>Small treadle</td>
</tr>
<tr>
<td>S980 060028</td>
<td>Foot lifting rod</td>
</tr>
</tbody>
</table>

2.3 Motor

The supply contains its own motor, switch - circuit breaker, all cabling (except of the plug) and material for connection. It can contain a control panel according to the type of motor. If it hasn't been agreed otherwise, it is supplied in separate pieces. A machine without trimming is equipped with clutch lever motor. However if positioning is asked or electromagnetic foot lifting or electromagnetic reverse stitching (bartacking) the machine without trimming must be equipped with stopmotor.

www.promelectroavtomat.ru
Motors are chosen according to the following table:

<table>
<thead>
<tr>
<th>Machine subclass number</th>
<th>Ordered number</th>
<th>Name</th>
<th>Diameter of pulley (mm)</th>
<th>Machine rev. max./min 50 Hz/60 Hz</th>
<th>Approx. specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>X11</td>

<td></td>
</tr>
</tbody>
</table>

Above mentioned stop motors were tested in the machine and they meet functional requirements. Other types of stop motors can have but need not have suitable parameters. Producer does not recommend using the other stopmotor without testing.

2.4 Motor pulley

By stopmotor EFKA DC 1600/DA82GA is revolutions are set continuously by electronics.

With machines where working with a high twisting moment is necessary due to sewing heavy materials (sewing category 3 and 4) the manufacturer recommends using pulley ø 42 (M 048).

The diameter of the motor pulley in mm must be by asynchronous motors according to the following quotation:

\[
\text{Diameter of pulley} = 71 \times \frac{\text{sewing speed (st/min)}}{\text{motor revolutions (rev./min)}}
\]

The smallest diameter of pulley is 42 mm considering used V-belt. Belt cover on the motor limits the biggest diameter of pulley to 127 mm.

The pulley for the maximum or other sewing speed will be supplied on express wish of the customer.

1) When the customer will not order anything else, he will get a pulley for standard sewing speed. Owing to a limited assortment of pulleys, the effective sewing speed may slightly differ from that declared and quoted in the column.

2) The table gives effective pulley diameter which is by 4 to 5 mm lower than the outer diameter.

Note.: The effective diameter of the hand wheel pulley is 71 mm.
Sewing speed of machines: standard  
Mains voltage frequency: 60 Hz

When the customer requires another sewing speed than standard, he may additionally order another pulley according to the following table:

<table>
<thead>
<tr>

3. Table top

In case buyer will provide his own table top its drawing is shown in supplement.

4. Machine assembly

It is described machine assembly with stand here which is supplied in separate pieces. Otherwise use these instructions adequate.

4.1 Stand frame assembly

A frame is assembled according to the picture.

www.promelectroavtomat.ru
4.2 Assembly of components on the bottom of table top

- Put down antiskid (rubber) bands on the stand frame.
- Turn the table top up side down and put it down on prepared bands.
- By means of screws screw the drawer (1) down.
- Nail down the rubber stop (2).
- By means of screws fasten transformer for lighting (3) if available.
- By means of screws fasten transformer for trimming (4) if available.
- By means of screws fasten switch – circuit breaker (5).
- Screw the motor holder down (6) (possibly motor). Lever clutch motor is assembled into the holes (A). Stop motor into holes (B).
- By means of clips (7) install transmission line of heavy current conductors. Connection is different from the type of motor, supply voltage and number of conductors of electric supply. In case of quad (four wire) supply 3 x 400 V, transformer for lighting must be supplied with separate supply cable 1 x 230 V.

Caution!
The voltage in the mains must be in conformity with the voltage indicated on the drive plate.

Caution!
The transformer of the bulb for the sewing area is not switched off by the main switch (EN 60204-3-1). Before proceeding to any repair operation in the transformer box (such as a fuse exchange) the plug categorically must be taken out of the socket. Such operations may be carried out only by persons with adequate electrotechnical skill.

Choose the suitable variant according to the pictures:

4.2.1 Power supply  1 x 230 V - DC motor

Circuit layout - Europe

Circuit layout - America

www.promelectroavtomat.ru
4.2.2 Power supply 3 x 400 V - five wire power distribution, power supply 3 x 230 V - four wire or five wire power distribution

4.2.3 Power supply 3 x 400 V - four wire power distribution plus 1 x 230 V - two wire cable
4.3 Assembly of a table top on a stand frame, assembly of oil tank

- Turn the table top around and screw it down to the frame by means of screw φ 8 x 35 mm. When applying a frame different from that recommended by the producer, be sure to adapt its position so as to ensure the stability of the machine head in its tilted state.
- Oil tank (1) with assembled lever (2) insert through the bottom part into the cut hole in the table top and put down as shown in that way, that the edge of the tank would fit in with the edge of the cut hole in the table top. Set the height of the tank according to the section A-A. Tank may not protrude out of upper surface of a table top. Nail down the tank with nails φ 2 x 40 mm.
- Adjust the lever (2) to the dimensions “B” and “C”.
- Insert rubber inlays (3) into the groove in a table top.

4.4 Assembly of machine head onto a stand

- Stick down rubber inlays (2) with glue into the table top (1).
- Disassemble trasported tank (cover) from the machine head and assemble hangers (4) on the head.
- Put the head down into the rubber inlays (2) and (5).
- Define space along circumference of basic machine plate - 1,5 mm.
- Insert supporting pin (3).
4.5 Assembly of motor pulley, belt, belt covers, hand wheel

- Disassemble hand wheel (1).
- Assemble motor pulley (2).
- Insert V-belt (3) and tighten it by leaning out of the motor. V-belt is tightened correctly when the opposite sides of belt are approaching to each other in distance of about 20 mm with power 10 having an effect in the middle of both sides. Stop motor should be leveled so that the bottom surface of its control panel would be horizontal.
- Adjust the stop (4) by bigger pulleys against falling the belt out of the pulley so that the distance from the belt will be 2-3 mm. Adjust pins by smaller pulleys (5) according to the detail (D).
- Assemble the bottom cover belt (7) on to the motor.
- Assemble upper cover belt (6) and hand wheel (1) by clutch lever motor.
- Assemble upper cover belt (6), hand wheel (1) and position reader by stop motor but only after electrical connection of the head to the stopmotor (see par. 4.7).

4.6 Assembly of treadle rod, setting rod and of position reader, knee lever

- Insert treadle rod (1) on pins.
- Adjust approx. length of rod by means of screw (2). If the ends of rod are too long, shorten them.
- Install the pin into the hole (3) by stopmotor EFKA. Adjust the lever (4) so that it would be approx. square angle at a rod (1) - take off the ring (5), loosen the screw (6), take of the lever (4) and assemble it into desirable position.
- Loosen the screws (9) by clutch lever motor and turn the motor with lever in such a way that the lever (10) would be in direction of the rod axis (1).
- Adjust angular turning of treadle (11). The position of treadle is correctly adjusted if there is a square angle at the shinbone of the operator to the treadle.

4.7 Electrical connection of machine head to the stopmotor

4.7.1 Connecting cable

Together with the machine head there is supplied a connecting cable for the following drives:
EFKA DC 1600/DA82GA 3311 and higher
EFKA VD 552/6F82FA 2315 and higher
EFKA VD 554/6F82FA

When there is no drive specified, a cable without any connecting power plug is supplied (mind the caution 2.3).

For the information sake, there are given the respective circuit layout.
The colours are indicated with numbers in brackets (6 – green, 7 – blue, 8 – pink, 9 – black, 10 – white, 11 – violet, 12 – yellow, 13 – red, 14 – grey, 15 – brown). Included insulating covers PVC (5) are put on the bunches and they are put together with remaining part of cable insulation by means of contracted tube (4) (it is heated up with fire of lighter).

Power connecting cable is marked off with dotted line in circuit layout.

Stopmotor S359 600045 XXX - EFKA DC 1600/DA82GA
Stopmotor S359 600052 XX - EFKA VD 552/6F82FA
Stopmotor S359 600056 XX - EFKA VD 554/6F82FA

- Fasten knee lever (12) onto the shaft (13) and adjust it in a position that it is shown in the picture (slightly leant out).
4.7.2 The actual electrical connection

- Install the power supply cable (2) so that connector (3) is in the direction of a head. The other connector (connectors) is (are) connected into terminal box rack of the stop motor according to the pictographs that are situated on it.
- Install the cable of control panel (4) and connect it to the terminal box of stop the motor according to the pictographs.
- Pass the cable of position reader through (5) and connect it to the terminal box of the stop motor according to the pictographs.
- Install lighting if available and connect its cable (6) to the cable of transformer.
- Install the earthing cable (7) one end to the hanger (8) and second end to the holder of stop motor.
4.7.3 Fastening upper cover belt, position reader, control panel of stopmotor and thread stand

- Screw the stop to the belt guard.
- Assemble upper cover belt and hand wheel according to par. 4.5.
- Set the position reader (3) on the handwheel pin so as to match the stop groove of the position reader with the stop (thus immobilizing the position reader).
- Fix the position reader by retightening the two hexagonal screws.
- Fix the control panel of stopmotor:
  - Stick the panel V 810 (1) by stopmotor EFKA on the machine head (if any). Defat the contact surface properly. Stick the clip (2) on the cover belt.
  - With the Efka stopmotor, mount the holder (4) on the panel V820 (5) (if any) using screw and screw on the holder with the panel to the stand table.
- Assemble the thread stand so that its arms would be parallel to the longer edge of a table top.
5. Basic setting of stopmotor and position reader

5.1 Generally
The procedure of setting parameters of the stopmotor S359 600045 XXX - EFKA DC 1600/DA82GA on the level of the operator is described in the first part of the Instruction manual - par. 7.2.1.2 (V810); par. 7.2.2.2 (V820).
A correct function of the sewing machine with drive is attained when changing some parameters of the drive, which are inaccessible for the attendance of the machine. Hereinafter there is a description of the possible procedures of changing all parameters.

Procedure of changing parameters of the drive Efka S359 600045 810 - DC 1600/DA82GA; S359 600052 XX - VD 552/6F82FA and S359 600056 XX - VD 554/6F82FA (panel V 810)
- depress the pushbutton on panel and switch on thereafter the main switch
- on the display there will appear C 0000, the 1st digit flashes
- using pushbutton + - set the 1st digit on the value 3
- depress the pushbutton >>, the 2nd digit flashes
- in the same way set the remaining digits in the way to get displayed on the display C 3112 (the number of the code for the possibility of changing all parameters of the drive)
- depress the pushbutton E, on the display will appear F 200 (parameter number 200)
- using pushbuttons >>, +, - set the required parameter number and depress the button E
- using pushbuttons +, - set the required parameter value
- depress the pushbutton E (a parameter number following in the sequence will appear) or P (the same parameter number will appear)
- carry out the termination of changes in depressing the pushbutton P (return to the respective sewing mode)
You will find a detailed information in the original directions for use of the drive.

Note: To get the change of parameters permanently stored, it is necessary, after having changed the parameter, to depress the pedal in forward direction.

Procedure of changing parameters of the drive Efka S359 600045 820 - DC 1600/DA82GA; S359 600052 XX - VD 552/6F82FA and S359 600056 XX - VD 554/6F82FA (panel V 820)
- depress the pushbutton P on panel and switch on thereafter the main switch
- on the display there will appear C 0000, the 1st digit flashes
- using pushbutton 0 ÷ 9 set C 3112 on the display (code number for possible changing of all drive parameters)
- depress the pushbutton E, on the display will appear F 200 (parameter number 200)
- using pushbutton 0 ÷ 9, set the required parameter number and depress the pushbutton E
- using pushbutton +, - set the required parameter value
- depress the pushbutton E (there will appear further parameter number in the given sequence) or P (the same parameter number will appear)
- the termination of changes is to be done in depressing the pushbutton P (return to the sewing mode)
A detailed information is in the original directions for use of the drive.

Note: To get the change of parameters permanently stored, it is necessary, after having changed the parameter, to depress the pedal in forward direction.

5.2 Stopmotor setting S359 600045 XXX - EFKA DC 1600/DA82GA 3312

5.2.1 Setting position reader
- set parameter 170, Sr1 is shown on the display (reference position)
- depress pushbutton >>, PoS 0 appears on the display and changing symbol of rotation
- turn the hand wheel until symbol of rotation disappears
- turn the hand wheel to angular value 105° of hand wheel (thread tip is approx. in the level of throat plate)
- depress pushbutton E, changeover to parameter 171
- set parameter 171, Sr2 is shown on the display (all positions)
- depress pushbutton >>
- 1 XXX is shown on the display (value of first position of needle)
- turn the hand wheel until value XXX begins changing
- turn the hand wheel to the angular value of first position (135° on the hand wheel respective 30 on the panel)
- depress pushbutton E
- 2 XXX is shown on the display (value of upper position of take-up lever)
- turn the hand wheel until value XXX begins changing
- turn the hand wheel to the angular value of upper position (65° on the hand wheel respective 450 on the panel)
- depress pushbutton P 2x (return to the sewing mode)
- step shortly treadle down forwards (entry to the memory)
5.2.2 Changes of setting parameters of stopmotor setting considering original producer setting

<table>

5.3 Setting stopmotor S359 600052 XX-EFKA VD 552/6F82FA and S359 600056 XX-EFKA VD 554/6F82FA

5.3.1 Setting position reader

Positions are set by means of discs with cut outs directly in position reader.

**Setting bottom position:**
- Disassemble the cover of position reader
- Disconnect head power supply cable from drive
- Switch on the power supply switch
- Step treadle shortly down forwards (machine stops in first position of needle)
- Switch off the power supply switch
- Turn the beginning of cut out 1 of coinciding discs so that machine would stop at the value 135° of the hand wheel
- Carry out check by repeating procedure

**Setting upper position of thread lever:**
- Step treadle down backwards (machine stops in upper position of needle)
- Switch off the power supply switch
- Turn the beginning of cut out 2 of separate disc so that machine would stop at the value 65° of the hand wheel
- Carry out check by repeating procedure

5.3.2 Changes in parameters of stopmotor setting considering original producer setting

<table>
<thead>

</tbody>
</table>

6. Examination of sewing

**Caution! Risk of injury!**
Before threading a thread switch the main switch off and wait until the motor stops.

- Check the sense of turning the hand wheel – according to the arrow situated on it.
- Thread a thread.
- Choose sewing material.
- Switch the desirable function on the control panel of stopmotor. Examination should be carried out with selection of fancy bar.
- First sew slowly then speed up the sewing.
- If the stitch does not meet requirements, follow the first part of instructions manual or service book.

www.promelectroavtomat.ru
