2. Starting Service

Before putting the control into operation, the following must be ensured, checked and/or adjusted:

- The correct installation of the drive, the position transmitter and accompanying devices, if necessary
- The correct adjustment of the direction of rotation of the motor with parameter 161
- The correct selection of the trimming operation with parameter 290
- The correct selection of the functions of the pushbuttons (inputs) with parameters 240...249
- The correct positioning speed with parameter 110
- The correct maximum speed compatible with the sewing machine with parameter 111
- The setting of the positions
- The setting of the remaining relevant parameters
- Start sewing in order to save the set values

See instruction manual for details!
